This product is marked according to the **European Directive (2002/96/EC) on Waste Electrical and Electronic Equipment (WEEE)**.

The symbol on this product indicates that this product must not be disposed of with normal household waste. Please protect human health and the environment by disposing of this product responsibly in the correct manner.

For further information regarding the disposal, treatment, recycling and recovery of this product, please contact:

Prochem Europe Sales Department
Telephone: +44 (0)20 8974 1515

Prochem Europe Ltd. EEE Producer Registration Number: WEE / AJ0044SY

European Directive (2002/95/EC) Restriction of use of certain Hazardous Substances in Electrical and Electronic Equipment (RoHS).

This equipment does not contain more than the maximum permitted levels by weight of the following substances:

Lead (Pb), Mercury (Hg), Cadmium (Cd), Hexavalent Chromium (Cr (VI)), Polybrominated Biphenyls (PBB), Polybrominated Diphenyl Ethers (PBDE)

MACHINE WARRANTY

DATE EFFECTIVE: 1/7/15

As of the above date, this warranty supersedes all previous warranties and forms part of the contract of sale. Prochem Europe Ltd. (hereafter referred to as "Prochem") guarantees this machine to be free from defects in materials and workmanship for the relevant time period as shown below, and from the actual date of purchase by the user. Proof of the purchase date from a Prochem Authorised Distributor will be required for performance of this warranty.

Rotationally moulded polyethylene tanks2 Years
All other parts except maintenance items (see below)1 Year

THIS WARRANTY EXCLUDES NORMAL MAINTENANCE ITEMS, including but not limited to HOSES, FILTERS, O-RINGS, DIAPHRAGMS, VALVES, DRIVE BELTS, GASKETS, CARBON BRUSHES and damage to motors and other components as a result of failure to replace normal maintenance items. THIS LIST IS NOT EXHAUSTIVE.

To obtain performance of this warranty, contact the Prochem Authorised Distributor who supplied the product.

The Prochem Authorised Distributor is responsible as the selling agent for the provision of initial training in the correct use and application of the machine and approved chemicals. The distributor is also responsible for service maintenance and repairs during and after the warranty period and the administration of any warranty claims in conjunction with the Prochem Service Department. Failure of any of these provisions and responsibilities may invalidate the warranty and the authorised status of the distributor.

If Prochem receives notice of any defects during the warranty period, Prochem reserves the right to either repair, or replace components that prove to be defective. Goods must be returned before the warranty is approved. Goods sent out prior to the return of faulty items will be invoiced at current prices, subject to standard payment terms (see Prochem Standard Terms and Conditions of Sale). Replacement parts supplied under warranty will be guaranteed for the remainder of the original machine warranty and **NOT** from the date of installation. Spare parts supplied after expiry of machine warranty may be covered by a manufacturer's warranty, subject to inspection by Prochem Europe Ltd. and at its sole discretion. Normal maintenance items, however, are not covered. Replacement or credit of any returned parts will be at the discretion of the Prochem Service Department. Any subsequent refusal to accept their decision will serve to invalidate this warranty with immediate effect.

PROCHEM AUTHORISED DISTRIBUTORS are responsible for machine and accessories service back up during and after the warranty period. Prochem will furnish parts if the warranty is approved, but **DISTRIBUTORS** will be responsible for fitting, service, labour and related charges including travel, if applicable, and the cost of returning the machine or parts to Prochem. If any chargeable work is undertaken by Prochem for **DISTRIBUTORS** the labour, parts (if applicable) and return carriage will be charged at **FULL LIST PRICE**. If warranty is approved due to genuine manufacturing defect, then labour charges and carriage charges may be waived at Prochem's discretion.

Prochem may send replacement parts to customers supplied by a **DISTRIBUTOR** or directly by Prochem, subject to the same conditions of replacement and payment above. The customer, however, will be responsible for fitting, labour and the carriage costs of returning repaired parts. Alternatively, Prochem will undertake warranty work at Chessington, subject to the same conditions, but the customer will be responsible for all carriage charges.

Any of the following circumstances involving the machine will serve to invalidate this warranty:-

NORMAL WEAR, ACCIDENTS, USE OF THE MACHINE FOR A PURPOSE OTHER THAN THAT FOR WHICH IT WAS INTENDED, INCORRECT MAINTENANCE, THE USE OF CHEMICALS OTHER THAN THOSE SUPPLIED OR APPROVED BY PROCHEM, INCORRECT INSUFFICIENT OR NON-USE OF DEFOAMER, EXPOSURE TO EXTREME TEMPERATURES OR CONDITIONS, INCORRECT INSTALLATION OR REPAIR & UNAUTHORISED INTERVENTION.

Liability is excluded for the following:-

All forms of damage and special damage founded in tort (apart from death and personal injury) and contract law including but not limited to consequential loss, loss of income and losses incurred in reliance of the contract; service, labour or third party charges and the cost of returning the machine or defective parts to Prochem or Prochem's Authorised Distributor.

As against a person dealing as a consumer, this warranty creates specific rights in addition to any statutory rights, which are unaffected. As against a person dealing otherwise than as a consumer, however, this warranty excludes any implied term that the machine will correspond with a description or a product sample.

With the exception of some specific products which are labelled and intended to be used by a consumer, all equipment, machinery, accessories, products, services and advice supplied by Prochem is intended for professional and industrial use only.

Your Prochem unit is designed to give you many years of reliable service. If a problem should arise during or after the warranty period, contact the Prochem Authorised Distributor or the Prochem Service Department, for details of the services available. Only the original purchaser of the new equipment may seek performance of this warranty – these rights cannot be transferred to a third party.

Machine Warranty Issue 10 1/7/15

WARNING!

- **Warning!**
Machines shall not be used by children. Children should be supervised to ensure that they do not play with the appliance. This machine can be used by people with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they have been given supervision or instruction concerning the use of the machine in a safe way and understand the hazards involved.
- **Caution** this machine is for indoor use only.
- **Caution** this machine shall be stored indoors only.
- **Warning!**
This machine must be disconnected from the mains during cleaning or maintenance, when replacing any parts or converting the machine to another function.
- **Warning!**
Do not allow the power cord to come into contact with the rotating brush.
- **Caution** under no circumstances should the machine be carried by or bumped up a flight of stairs using the handle, always empty the bucket before storage or transporting the machine.

IMPORTANT SAFETY INSTRUCTIONS

**PLEASE READ THE FOLLOWING IMPORTANT SAFETY INSTRUCTIONS (!!)
BEFORE ATTEMPTING TO USE THIS EQUIPMENT. FAILURE TO OBSERVE
THE INSTRUCTIONS MAY RESULT IN PERSONAL INJURY.**

!! CAUTION

Read the instruction manual before using the appliance.

!! USE ONLY WITH STEEMPRO 2000

The Heat N Run unit has been designed for sole use with the Prochem Steempro 2000 carpet soil extraction machine fitted with pressure relief valve and high pressure solution hose. Do not attempt to use the Heat N Run with any other machine, solution hose or accessory attachment not recommended by the manufacturer.

!! APPLIANCE SUITABILITY

This appliance is suitable for commercial use, for example, in hotels, schools, hospitals, factories, shops, offices and rental businesses.

!! UNPLUG FROM MAINS when not in use or during cleaning and maintenance – the plug is to be removed from the outlet socket.

!! TRAINING

You must be trained in the operation of this unit before use. Please read this manual carefully and obtain operating instruction from your Prochem Distributor or authorised representative in the correct use of this equipment.

!! REPAIRS

Should any repairs, including supply cord replacement be required, we recommend that the appliance be returned to an authorised dealer.

!! ELECTRICAL CABLE INSPECTION & REPLACEMENT

This unit must be earthed while in use to protect the operator from electric shock. It is equipped with a sealed and approved EC three conductor cable and three-prong 13A plug. If the supply cord is damaged it must be replaced by a special cord or assembly available from the manufacturer or its service agent. During operation a hazard may occur when running the machine over the power supply cord. Regularly examine the supply cord for damage, such as cracking or ageing. If damage is found replace the cord before use.

!! RCD CIRCUIT BREAKER

In common with other household and commercial electrical equipment, an 'RCD' circuit breaker plug device is strongly recommended for this type of equipment.

!! EXTENSION CABLES

Avoid using extension cables with this unit. If an extension cable is used it should be of a suitable rating, fully uncoiled and no longer than 30 metres. Use only three wire CE approved extension cable with CE approved three-prong earthed plugs and three pole receptacles that accept the unit's 13 amp plug.

!! DO NOT use a multiple adaptor socket to connect the machine and the heating unit or other devices to a single extension cable.

!! DO NOT immerse unit, cord or plug in water or other liquid to operate such as during flood extraction. Do not mount the unit over a bucket or sink. **SERIOUS INJURY OR DEATH MAY RESULT IF UNIT IS IMMERSSED IN WATER!**

!! DO NOT pull the unit by the cable or hoses.

!! DO NOT place the unit on or let the power cord contact any heated surface.

!! DO NOT use the unit with or near solvents or any flammable liquid or vapours. The heating unit can ignite flammable vapours such as fuels, solvents or thinners.

!! DO NOT operate the unit unless it is completely assembled.

!! DO NOT attempt repairs or maintenance unless you are suitably qualified or experienced. Repairs and maintenance should only be performed by qualified personnel and the unit should be tested for electrical safety before re-use.

!! SPRAY LIQUID ejection could be hazardous as a result of its temperature, pressure or chemical content.

!! IF LIQUID comes from the unit switch off immediately.

!! ALWAYS disconnect unit from mains supply when left unattended.

!! DURING USE UNIT MAY BECOME HOT. Do not touch hot surfaces. Use handle. Allow to cool before maintenance or cleaning. Close supervision is necessary when unit is used near children.

GENERAL DESCRIPTION OF APPLIANCE

The Heat 'n' Run unit is an accessory for use in conjunction with a machine from the Steempro range of hot water spray extraction machines.

The 2.8KW heater unit will provide hot water between 60C to 80C and is thermostatically controlled to carry out this function.

IMPORTANT OPERATING INSTRUCTIONS

PLEASE READ THE FOLLOWING IMPORTANT OPERATING INSTRUCTIONS (!) BEFORE ATTEMPTING TO USE THIS UNIT. FAILURE TO OBSERVE THE INSTRUCTIONS MAY RESULT IN DAMAGE TO THE EQUIPMENT.

! DO NOT use the unit outdoors. The unit is designed for indoor use only.

! DO NOT expose the unit to rain or freezing temperatures. Drain solution and store indoors when not in use.

! DO NOT operate the unit unless it is connected to the Steempro extraction machine.

! DO NOT use the unit with boiling water or temperature in excess of 95°C.

! DO NOT operate the unit at more than 300psi (20.7 bar) unless in conjunction with the special high pressure hoses supplied with the Steempro Powerplus 500 model.

! DO NOT use chemicals in the unit other than those manufactured or recommended by Prochem Europe.

! DO NOT operate the unit with a damaged power cord or plug, or after the unit malfunctions, or has been damaged in any manner. Return the unit to your authorised dealer or to Prochem Europe Service Department for examination, repair or adjustment.

! DO NOT attempt to repair the unit while it is under warranty. Contact your authorised dealer or Prochem Europe Service Department.

! DO NOT run the solution pump and heating unit dry. The unit must be filled with water based solution at all times when in use. Always switch off and disconnect the unit electrical supply when re-filling with solution.

! ALWAYS use a clean bucket to fill the solution tank of the Steempro machine to which the unit is attached.

! AFTER USE flush solution system and unit with clean water.

! ALWAYS observe directions and safety precautions on chemical products.

! USE ONLY genuine replacement parts for this unit, supplied by an authorised Prochem Distributor.

! DO NOT use this unit for any purpose other than for its intended design function. Any deviation from its proper use or purpose and any consequential damage that may occur is the sole responsibility of the user.

OPERATING INSTRUCTIONS

PUTTING INTO SERVICE

Read this manual carefully and completely before attempting to operate the unit. This manual has important information for the use and safe operation of the unit and should be kept available at all times. This equipment will ensure years of satisfactory service if operated and maintained according to recommendations in this manual. If additional help or information is needed, please contact your distributor or Prochem Europe Ltd.

FAILURE TO OBSERVE THESE INSTRUCTIONS MAY SERIOUSLY AFFECT THE PERFORMANCE OF THE UNIT AND INVALIDATE THE WARRANTY

IMPORTANT

The Prochem Heat N Run unit is designed only for use with the Steempro carpet soil extractor and 300psi high pressure solution hose. During use the unit will generate high temperatures and high pressure that will require the operation of the internal pressure relief valve system that is fitted as standard to all Steempro machines. If the unit is used in isolation or with other types of equipment it is possible that high heat and pressure build-up may damage hoses, equipment or cause personal injury.

OPERATING INSTRUCTIONS

1. Make sure that the Heat 'N' Run is plugged into an electrical outlet with the same voltage rating as shown on the nameplate of the unit. Do not attempt to plug a 120 volt unit into a 230 volt outlet.
2. Connect the Heat 'N' Run to the fitting plate on the rear of the Steempro machine. Connect the cold water inlet hose of the unit to the machine outlet connector. Connect the high pressure solution hose from the cleaning wand to the hot water outlet on the unit (see illustration on parts list page.)
3. Before plugging in the unit power cord, run cleaning solution through the Heat 'N' Run to fill the heater chamber. Turn on solution pump and spray a little cleaning solution from the wand, this will purge the unit of air and ensure it is charged with cleaning solution.
4. Plug the cord into a circuit separate from any other appliance. Turn heater switch to the "On" position. The switch becomes illuminated and the indicator light goes "on". Within two minutes, the indicator light will go out, and the operating temperature, 60C to 80C (140F to 176F) will be reached, the switch will remain illuminated throughout use.
5. The unit heat up times may vary with the temperature of the water in the solution tank the warmer the solution in the clean tank the lower the heat up time, this will also allow the unit to maintain the operating temperature with ease. Due to a small heater chamber, it must be remembered that long periods of wand use will quickly exhaust the solution in the heater chamber and time must be given to allow the water to be heated up again.
6. Once the unit's indicator lamp has extinguished the normal operating temperature has been reached and cleaning can begin. During normal operation, the indicator lamp on the unit will illuminate and extinguish during the heating cycle as the element is turned on and off by the thermostatic control, if for any reason the unit overheats and reaches 115C (240F) then another thermostat with a breaker will be operated and the unit's power will be cut. You will see that the previously illuminated power switch is now extinguished and will remain so until the breaker is reset. This feature is a safety feature to prevent damage to your person and your equipment.
7. Before disconnecting the unit, it must first be cooled. This can be done by ensuring that there is still sufficient solution in the tank, switch the unit off using the power switch, switch on the solution pump and spray some solution through the wand until cool solution is present at the spray tip. The unit should then be sufficiently cool to be disconnected. This cool down method must also be used if you are just switching the unit off with no intention to disconnect.

STORAGE AND TRANSPORTATION

The heat and run unit is very light (4.7 kg) and can easily be carried by one person, the unit can also be transported on the rear of any Steempro machine, but care must be taken when loading a Steempro into a vehicle with the unit fitted, best practice dictates that the unit be removed to prevent damage.

All units filled with water are susceptible to damage caused by freezing temperatures, it is therefore necessary to store the unit in an area that will not be affected by low / freezing temperatures.

USE OF PERSONAL PROTECTIVE EQUIPMENT (PPE)

Although the use of the Heat & Run unit requires no PPE, it must be remembered that this unit can **only** be used in conjunction with a Steempro machine.

Operation of this accessory with the Steempro machine requires the use of protective latex gloves. Please be aware that the chemicals may require specific PPE to be worn. This can be found on the Material Safety Data Sheet (MSDS) for that particular product.

GENERAL MAINTENANCE

All Prochem equipment is engineered and built to require a minimum of maintenance. But like any equipment, it does require some care to keep it in optimum working condition. Careful attention to these maintenance instructions will give you maximum operating performance and will increase the life expectancy of the machine.

To ensure a trouble-free machine, we strongly advise the following preventative maintenance.

DAILY MAINTENANCE

The following should be carried out at the end of each cleaning session.

POWER CABLE & PLUG

Check the condition of the power cable and plug. Make sure all wires are correctly located and tightly connected. If damaged, the power cable and plug assembly must be replaced.

DO NOT ATTEMPT REPAIR

Instruction for replacement of power cable with combined plug.

!! CAUTION - ONLY QUALIFIED MAINTENANCE PERSONNEL SHOULD ATTEMPT THE FOLLOWING REPAIR

Should the power cable require replacement, please follow the instructions below.

1. The replacement cable and plug shall be of the same specification as the original Prochem part number BE4901 (3 core 1.5mm with 13Amp sealed plug unit)
2. Ensure that the unit is disconnected from electrical supply and open electrical housing by means of tool required.
3. Disconnect the live (brown), neutral (blue) and earth (green/yellow) wires from the cable terminal block by means of unscrewing the terminal block wire clamp screws.

4. Unscrew the outer cable gland and cord anchor screw to release the cable which can then be pulled out of the cable gland assembly.
5. Insert the new cable through the cord anchor and cable gland and secure the outer cable by means of tightening the outer cable gland and the anchor securing screw.
6. Connect the live (brown), neutral (blue) and earth (green/yellow) wires to the cable entry gland terminal block by means of inserting the wire conductors into the terminal block as follows :-
The conductor of the wire coloured brown shall be connected to the terminal marked (L), the conductor of the wire coloured blue shall be connected to the terminal marked (N) and the conductor of the wire coloured green and yellow shall be connected to the terminal marked with the Earth symbol thus - 
7. Ensure that all connections are secure and close electrical housing and secure with tool required.

BODY AND FITTINGS

Inspect the outer body of the unit for signs of leakage or damage. Check tightness of all screws and security of hose connectors and hose fittings.

WARNING! FREEZING PROTECTION

If your unit is exposed to freezing weather with solution inside, the solution will **FREEZE** and in most cases **SERIOUSLY DAMAGE** the unit. To avoid damage, consider the following in the winter season. When the unit is not in use, store it in a **heated building**. To avoid freezing between jobs, pump out all the cleaning solution from the machine, Heat 'N' Run unit, wand and hand tool and make sure all equipment is insulated from the vehicle floor (wrap in a blanket or tarpaulin).
